DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 24, 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Bourgoin et al. (6,643.,521).

With regards to claims 24, 26, are rejected because Bourgoin teaches a system of controlling call admission in a communications network, comprising:

load calculating means for calculating a load level as a function of previous(total measured power limit i.e. acceptable interference limit, col. 1 lines 15-32) and current measured power(measured additional power of candidate user); and control means for controlling call admission based on the calculated load.(reject candidate if total power is beyond limit).

Application/Control Number: 09/401,326

Art Unit: 2661

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bourgoin et al.(6,643,521)

With regards to claim 25, Although Bourgoin fails to teach call admission control as a function of users, there is a one-to-one correlation between the interference limit and number of users. In CDMA, because each user acts as an interference source, the total acceptable interference limit can be expressed in terms of the number of users. Also since a new caller represents interference, this interference is compared to the previous limit and a determination is made whether or not to add the new caller. Hence this feature is it would have been obvious to one of ordinary skill in the art to use the number of callers since measured power and number of users correspond to one another.

Allowable Subject Matter

Claims 2-11, 13-23 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth N Vanderpuye whose telephone number is 571-272-3078. The examiner can normally be reached on M-F(7:30-5:00) Second Friday Off.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
